Considerations on the evaluation of the indicators in the report:

• Indicators are evaluated through perception and the evaluation results range from 0 (zero) to 10 (ten).

• Indicators translate the items that will be evaluated.

• The difference of degree, less than 1%, was disregarded.

Index: Degree that represents the perception of **all** respondents about **all** evaluated indicators per item.

Strong Point and Weak Point: With the index and the standard deviation of respondents' perception, we find the **maximum and minimum degrees of respondents' perception**. Indicators above maximum degree are the **Strong Points** and the ones below are the **Weak Points**.

Indicators considered **Strong Points** or **Weak Points** are found without association with defined degrees.

Minimum Ideal per Indicator: In the existence of Weak Point(s) the degree is found to know the percentage of necessary improvement to **eliminate** it. In this case, some indicators that **are not initially Weak points suffer influence** of perception and now need to be worked on. In the absence of Weak Point(s), the Minimum Ideal per Indicator is the minimum degree of the group's perception.

Below the expression **"Indicator(s) to be worked on"** are the indicators that need to be worked on (Weak Point(s) that suffered the influence of perception). The percentage is calculated through the **indicator's degree** by **Minimum Ideal per Indicator degree**.

Critical Factor: When there is sharp divergence of perception between items.

General Index: Degree that represents all respondents' perception about all evaluated indicators in the Survey.

Stimulus to behavior change. Daily reflection:

	INDIVIDUAL	
	Daily Reflection	
	Indicator	**Degree**
1	Day planning	**7,60**
2	Tasks fulfillment	7,76
3	Schedule fulfillment	8,18
4	Communication with people	**8,24**
5	Support to people	7,89
	Index	**8,08**
	Minimum Ideal per Indicator	**7,74**
	INDICATOR(S) TO BE WORKED ON	
1	Day planning	2%

Strong Points **and** **Weak Points**

Note: The people do daily self-evaluation about their own behavior, and after a few days will know what to improve. It can be used to help professionals in psychology and other areas.
